

Fireman's Keyguard

Features

- Replacement windows available
- Suitable for keys or swipe cards

Specification

Housing	ABS plastic
Colour	Red
Dimensions	142 x 125 x 45mm
Country of origin	UK

Product Codes

EP-KG1	Red key guard
EP-KGW	Replacement window

Technical Overview

The EP-KG1 is a wall or panel-mounting key guard. The window is a non-hazardous clear plastic, with frangible side tabs designed to break in order to gain access to the keys or access swipe card.

It is ideal for use in situations where a glass window would pose a hazard, i.e. food preparation areas, schools etc.

Installation

1. Remove the plastic window and check that the side tabs are intact.
2. Remove the key plate (2 screws).
3. Fit the back box to the wall using the screws provided.
4. Replace the key plate.
5. Fit the blocking piece and spring, and hang the correct key on pillar (the pillar can be removed to store an access card).

Ensure that the correct key or access card is placed in the box, as once the window is fitted it cannot be removed without breaking the side tabs.

6. To remove the key or access card, pull on the **TOP** of the window, breaking the side tabs.

Assembly
